PROFESSIONAL SUMMARY

Full-stack and AI engineer with nearly 4 years of production experience at RamanByte, building ed-tech and marketplace software used by real institutions across India. Owns the full vertical slice: ASP.NET Web API / ASP.NET Core with SQL Server or PostgreSQL back ends, Angular 16–18 and Flutter front ends, and cloud delivery on Azure, AWS S3 and Firebase. Shipped six production systems including the Classroom+ LMS (admin, faculty and student portals), PIBM's peer-reviewed journal portal, and a dual-app Flutter marketplace launched on a fixed public date. Independently builds AI-native systems – RAG pipelines, LLM agent loops and autonomous security and QA agents – with a spec-first, audit-after discipline.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, Dart, SQL, HTML, CSS/SCSS

Back End: ASP.NET Core 8, ASP.NET Web API, REST APIs, Entity Framework Core, Clean Architecture, SignalR, FastAPI, Pydantic, SQLAlchemy

Front End: Angular 16–18 (RxJS, Signals, Reactive Forms, Angular Material), React 19, Next.js, Tailwind CSS, Bootstrap 5, Metronic 8

Mobile: Flutter, Dart, flutter_bloc, go_router, Firebase SDK, Google Maps SDK

Databases: SQL Server, PostgreSQL, Redis, Supabase, Neon, Prisma, Drizzle

AI / ML: RAG pipelines, embeddings and vector retrieval, LLM agent loops, Groq, Gemini, Ollama, OCR (Tesseract)

Cloud & DevOps: Microsoft Azure (App Service, Static Web Apps), AWS S3, Firebase / Google Cloud, GitHub Actions CI, Docker, Git, k6 load testing

Security & QA: OWASP Top 10, CWE mapping, PTES workflow, auth hardening, rate limiting, Playwright

Other: Three.js, React Three Fiber, GSAP, Canvas 2D, Excel / PDF export, i18n

PROFESSIONAL EXPERIENCE

Full-Stack Developer | RamanByte Pvt. Ltd., Pune, India | Jan 2023 – Present

Ed-tech company building Classroom+, a cloud LMS used by schools and institutes across India. Design C# Web APIs and SQL Server schemas, then build the Angular or Flutter layers that consume them, shipped to client production domains.

Vidur Industry Connect – Multi-Tenant Engagement Platform (Flutter, ASP.NET Core, SQL Server, Redis, Azure)

- Built the tenant admin dashboard from scratch with status and type analytics, donut charts and custom date-range filters; authored 38 commits across 9 merged PRs in 3-week sprints.
- Delivered the citizen engagement lifecycle: search, filter, rating, cancel/reopen with reason, and a near-duplicate guard flagging requests ~85% similar to one raised in the past week.
- Built the citizen profile suite with concurrent data loading and verified mobile re-verification; fixed analyzer errors that were blocking the GitHub Actions staging deploy gate.

Dada Udyogini – Seller & Buyer Marketplace Apps (Flutter, ASP.NET Core, PostgreSQL, Azure, Firebase)

- Integrated SMS/OTP messaging and logistics vendors into signup, order and fulfillment flows, including rate calculation, shipment creation and live tracking in both apps.
- Designed DadaLoad, a distributed load-testing platform: a .NET Worker Service running k6 across 10 Windows machines, orchestrated via ASP.NET Core and SignalR, simulating the full buyer journey with PDF/XLSX/JSON reports.
- Right-sized Azure resources against real traffic to cut hosting cost; both apps launched together on a fixed public date at a Maharashtra launch event.

Classroom+ LMS – Admin, Faculty & Student Portals (Angular, ASP.NET Web API, SQL Server)

- Admin console: timetable planning with copy mode and Excel export, faculty availability charts, program/batch/subject masters with bulk import, and 6-language i18n.
- Student app (live at student.classroomplus.in): attendance and assessment dashboards with FusionCharts, a 7-step placement-profile wizard, a filterable job board and a 9-stage recruitment pipeline.
- Faculty app (live at faculty.classroomplus.in): workload calendar, assessment authoring and grading, late-submission approval queue, attendance, mentorship and placement-profile review with Excel export.

A Journal of Management – PIBM Journal Portal (Angular 16, ASP.NET Web API, SQL Server, AWS S3)

- Converted a static template into a live, API-driven portal for a double-blind peer-reviewed journal (ISSN 2455-8796): 11 public routes and 3 user roles (author, reviewer, editor); 93 commits.
- Built email-verified author onboarding with a 3-step registration wizard, manuscript submission and revision flows, reviewer workflow, and AWS S3 document uploads.

TECHNICAL PROJECTS

Sarathi – AI Relationship-Manager Copilot for Banking | Next.js, TypeScript, Prisma, Supabase, Groq, Gemini | [GitHub](#)

- Built production RAG and document intelligence with a Customer 360 dashboard; split the pipeline into 4 independently testable modules (embeddings, vectors, retrieval, generation) across 17 library modules.
- Published a P0–P3 graded security self-audit of the system, surfacing and documenting critical auth and enumeration risks.

Nythera – Autonomous Penetration-Testing Platform | Python, async HTTP, LLM agent loop, Docker | [GitHub](#)

- Agent-driven scanner covering 9 vulnerability classes across a 7-phase PTES-style workflow; every finding requires physical evidence before it is reported.
- Internal-network scanning is default-off, host-locked with include/exclude rules and rate limiting.

HallogenAI – Autonomous QA Verification Agent | Python, FastAPI, Playwright, Pydantic v2, SQLAlchemy, Groq

- 8 specialized agents re-verify reported bugs against live application behavior, marking a bug fixed only on captured evidence, never on a commit.

BookVerse AI – Interactive Book Intelligence | Next.js 16, React, TypeScript, Tailwind, Groq, Ollama | [GitHub](#)

- Generates summaries, timelines, mind maps, character graphs and a grounded AI tutor; runs with zero API keys via 3 model paths and a local fallback.

VaultIQ – Enterprise Platform in Clean Architecture | C#, .NET 8, Angular 18 (Signals), EF Core, SQL Server | [GitHub](#)

- 4-layer Clean Architecture application pairing ASP.NET Core 8 with an Angular 18 Signals front end.

Antarang – Walkable 3D Art Museum | Next.js, React Three Fiber, Three.js, Drizzle, Neon | [GitHub](#)

- Interactive 3D gallery placing Indian art history on a dual-axis world timeline, targeting 60 fps; raycast throttling to ~10/s removed perceived jitter.

EDUCATION

Bachelor of Technology, Computer Science and Engineering | Dr. A.P.J. Abdul Kalam Technical University | 2021 | CGPA: 7.4 / 10
